15.

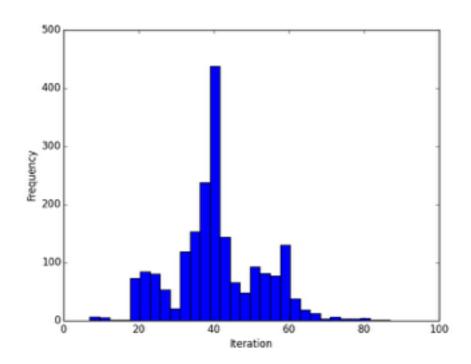

Updates:45

Index of the example that results in the most number of update:58

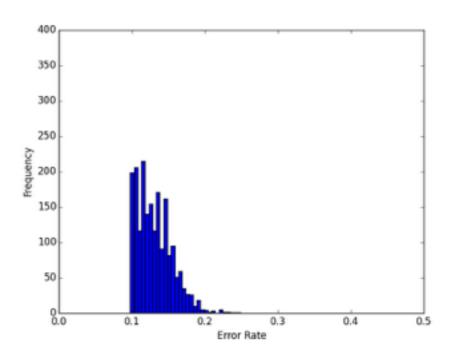

Average number of updates:40

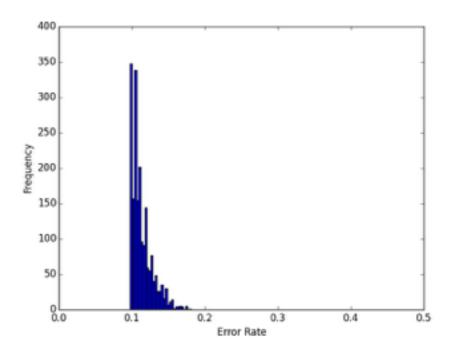

17. Average number of updates:40

在前面乘上一個constant的error rate和原本相同 18. Average error rate:0.131045

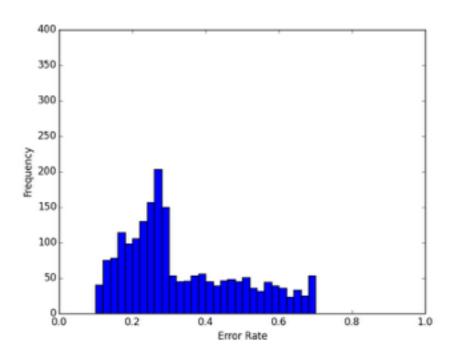

19. Average error rate:0.113475

這題update的次數比18題多,pocket algorithm是greedy algorithm,因此update的次數越多,所得到的結果就越好,除非update到無法得到更好的結果,且根據18,19的圖,可以看出圖19的error rate比圖18好

20. Average error rate:0.333

更新過後的w的error rate有可能上升也有可能下降,更新後的線只能確保檢查的那個點的結果是對的,但有可能造成原本是對的點,變成錯的點,因此update100次的w會比19題greedy的結果還差
